"OQ TV" NO. 2

Editors Note:

GREETINGS, oms,

Seasonal and otherwise - and thanks for the mail (and contributions). Its good to see that so much Good Work is being done, and I hope that this no. 2 issue will encourage everyone. It should be a bit larger and a good deal more interesting than the last, thanks to your contributions and corments.

News from the GPO is neither good nor bad. The ESGB are trying to errange a meeting with the powers that be, but to date have only received a snow from FaG level. However, it appears that this may be due to a lack of information on the PAG's part. In any event, not one reason for the refusal was given, and, in fact, it is difficult to think of any in view of the frequency and type of transmission we have in mind. I think we are almost certain to get the permission in time, if we cause enough bother....

To more immediate points, however. Pleace keep that mail rolling in, mything and overstains you have, enquiries requests, sales and mants, etc. Don't expect individual replies, though, except in certain cases, as it is VASTLY easier for me to reply via the Mag. or Circular Letter!

The typing of this edition may not be up to my usual immediate standard, as I am doing it it odd times on an assortment of W.D typewriters - this Edit rial is being done in the Guardroom of 1 T.B. Catterick Comp (on duty, not inside...). And so, near scroungers and BATCs. let me finish by apologicing for the letters I alsost certainly one you, and wish you all a very Happy Characters, with bags of 5527s in your stockings, and Prosperous New Year - with plenty of TV and no ORM. here and typewriters that don't jump lines ... and

See you in the next edition, oms,

GQ TV

THIS HOSTH'S SHORT NOTES ...

Someone did not got a copy of the first edition of the Mag., as I sent 24 copies to 25 people. If you were the odd min out, and would like a copy, please contact me and I will send on the spare copy. I have a few spare copies, but at 6d per time I cannot be too liberal:

Thanks very much for the stamps, all.

Remember to keep to the bands 420 - 432 mes (Channel A),
and 438 - 460 mes (Channel C) for TV, and leave Ch. B to

the Sound wallahs.

CALES AND WANTS SECTION:

FOR SALE: 10" Fall 3/4 Car, brand new complete with new mask. Heater - Cathode short, but tube is OK otherwise Htr. OK, no guarantee; offers to G2DHS, 50 Regent St. Stetfold, Bods.

WANTED: 1" - 3" Blue CRT for IFT. G30VO, Cheyne Cottage, Dukes Wood Drive, Gerrards Cross, Bucks.

WANTED: Transferences from the 1D= 6 = A/APN = 4. P.Parkin Abinger Arms, Abinger Burner, Surrey.

Will anyone interested in Hi - Fi and/or Tape recording ploase contact Fred Wood or Bob Styring. (Addresses clse-where).

Ely we have an article on \$20 mc RF equipment please!

Did you have about the YL who saw a cardboard block electrolytic, and enquired why we did not take it out of its box?

Host of the articles in this mag, are pretty technical.
In there a demand for some introductory notes Y-Arc YOU clear just what that term means? Frite and let us have your views.

Has anyone used an ex - BAF 3-45 Camera gun in an

IFTY If so, could we have the gen, ons?

And I apologiae for my absence at the Darlington Hamfeat. I was put on guard at very short notice. Sorry...

YTALS I can get a limited no. of crystals reground to your choice of frequency, \$3/8 a time, inc. post.
Anyone interested 1 contact GSCVO.

A PHOTO-CELL PREAMPLIFIER FOR THE 5500.

[This circuit was originally occimed for grow, and had a response flat to 20 mes, hir. Sale gives below values for EF50s, with a response to 4.5 mes. a figure suitable for

up to about 500 lines (SN7)

About 10 volts are available at the o/p co-ax socket. The Ph EHT must be FW rectified, and the amp. HT must also be very pure. If insufficient control is given by the Camera min con take another screen to the potentiometer. The Mcg./Pos. pha reversing switch is a ceremic one to be safe. Details of a suitable power pack using a S50-0-350 transformer for both HT will be given, after tests, in the next issue. Note that the shunt correction coils are pies taken from . Old Badar delay line, helved where needs ry.

IN THE NEXT EDITION: Articles on Non-interlace Pulse generators,
A simple monitor unit,
420 mc aerials, etc. etc.

A Survey Of Current Literature:

FROM RADICLYMPIA: Mullard's have a new valve out, the ME4000, which has a 15 volt filament. The Valve is a special EF37, and when used with a Photo-cell a grid leak of up to 1000 Megohns can be used. Just think of it a cuing of 1000 volts for a change of PEC current of 1 microamp! (What about the HF response, Pcto T H.B).

Pye's will lot you have their colour TV rig for about £35,000, always assuming you can stand the noise.

of the noters.

Have you fost that datar four troubles will be over, or almost, if you live in the London area. The magic lies in the Patent Office Library in High Holbern. This Ham's paradise contains nearly all the British, American and other Electronic mags, way back to the dim ages of cats whiskers and whirling discs (ahades of Pye.). The Library is free, but is for reference only.

A useful article on TV cameras is in a book called "Electronics", by Dr.-J.D.HeGeo of EMI, (odit. by Bornard Lowell). The article is on page 135, and contains

packets of refs. that can be locked up at Holborn.

retail for about £20, and the tube, a 25 job, for about £3. They hoped to soll it retail at the show. The No. is the 1935.2.

has a 930 in it, besides a Rotary Gon., etc.

By the way, have you seen the monthly Philips

(Rindhoven) Review?

green one by using an orange or red filtery

EXISSION SPECTRA OF C.R.T. SCREENS

A study of the constants of CRT screens is obviously a necessity if any work is being done on Interndiate film Transmittors. The docay time of the persistence is the chief controlling factor in the max. definition attainable in the system. A table of common screen materials and their characcristice is given below.

Material		Colcur	Debay Time	Uses
Zn0		Green	l microsec	film scanners
ZnS act.	CJ		Up to hours.	TILE BOMMETS
Zn2S10.	Hn		10 mid Placer	CROS, VCR97 etc.
ZnS	Ag	Bluc	fow socs.	Bodor.
Ca.Wo.			S rigrosecs.	

Most ex wid reen tubes have the 10 millisec. afterglo Spectra curves for

corner tubes follow.

(c . Buhits trace IV rx tubes contain a mixture of compounds, some giving a bluo-green and some an orangored, the result being approx. white.

Thite trace For rax. Photo cell cutput, it is obviously desirable that the response of the photo cell should be a max. at that colour at which the acreen trace has a max. intensity. As onn be seen from the next curves, a 93la should work best

with Mue trace tubos, such as the surplus U.S tubos on the

at 4600 Angstrome, the same as the blue trace. The green trace lies off the 931/ cell curve.

Since it is the duration of the afterglow that is no important, any method of chortening it in practice or effect, will help a good deal.

filters my help. RCA say
that their Pf green phosphor
is down by 95% at 4850: A Might
so that in the U.V region

PI CONTROLLA PI CO

the intensity of the screen is prosumably nearly zero. It is not known what things are like with British tubes, nor with Blue tubes. BCA rake a P15 phosphor for TV use - with a 1.5 microsec. afterglow in the visual region, and a 0.06 microsec time in the U.V region. The trace has two peaks, one at 5000 and one at 3950 Amgstroms.

6.E.C have no data on the matter.

Asknowlegements to "Electronic Engineering", Aug. 1949.

SIMPLE CIRCUITS' LAPT: an Interlace Generator For to Lines

circuit on Page Eight. V6-V7 is a 20 kc multivibrator, locking V1 V2 on 10 kcs. The output from V6 also triggers the Ecclet Jordan Flip Flop, V3-V4. This is an electronic switch, either valve consucting as the other is cut off, the mode being reversed when a trigger pulse arrives.

Square waves from the anode of V3 are differentiated and applied to the grid of the Gate valve, V5. This valve is so biassed, by returning its cathodé to HT, that it will only conduct when positive pulses arrive on both control and suppr

ssor grids simultaneously.

360 Wolts of AC mains on the grid of V12 gives a square pulse at its anode. This is differentiated and amplified, and appears across RS as a sharp positive pulse every 1/80 sec. If width of this pulse is adjusted by as to be about one complet line in time, or with. Due to the gate action, ome of the dif erentiated Half Line pulses will appear at the anode of V5 ev 1/50th sec, and this pulse is fed back to the grid of V4. Bot grids of \$5 have gone positive, so that its anode has gone se otive. This means that, due to the DC competition in the circu the anode of VS, and so the grid of V4, have gone Positive, b the grid of 'V4 is already Megative, and the two pulses cancel No Malf Line pulse therefore reaches the screen of V8 in this onse, but the Flip Flop has now changed ever due to the trigg aption, and a pulse will be passed the next time, i.e half a line later Every alternate pulse at the mode of V5 is, in fa delayed by half a line. These pulses trigger the Frame Gate -SORRY FOR THE THIN PHER, AND THE PAGE MIX-UP! TIK

witch, V8-V9. The grid of V9 is returned to HT, and the valve assess a high current, developing allerge bins voltage across he common outhout resistor. This cuts off V8, and so only ine pulses pase to the cutput. When a negative trigger pulse rrives from V5, the grid of V9 is carried negative by the harging of C2. V9 cuts off, removing the bins from V8, and etting half line pulses through to the output socket. Provided he loading is light, the cutput, negative going, may be taken rom the common cathods. Positive output from the amodes may a inverted in a 35M7, the other half being used as a Cath. Fol wer.

Alignment is done on the CRO. Chock that both Multivibrate re working, and then look for pulses on the grids of V5. 2 50 yele poo. pulse on the suppressor, and pos. and neg. blips on he control grid should be obtained. The HA's are now unplugged nd the CRO is put on the common anode of VS-V9. R7 is turned ight down, so that the 50 cps trigger pulse appears. R7 is now urned up until V8, V9 trigger without oscillating, and the M/Ve re replaced! The CRO "iveform should fill up with Neg. Half ine pulses insade the to ops pulse, and Pos. Line pulses out ide. The signal can now be checked on a receiver, if the off s of the correct polarity. Inject the signal before the Sync! Separator for Nog. pulses, and ladjust 03 and 43 until the picre locks on line. The CRO is adjusted to give one line pulse on the screen. C4 and 21 are now altered until two faint Pos. sulses appear on the screen and lock in. The entire generator s now operating satisfactorily, and the output may be mixed with Frame pulses in the usual manner.

The Editor wishes to thank the setd. cartoonests of ITR who have helped out so notably.

HEMT DESTION --- AROUND J. NUARI loth, 1950.

GETTING ON 420 HC/S.

(From a lecture by Mr. W. .. Wellycs to the Onttorick A.B.C.)

working as 2 metros, on ground wave, the probability of ducting being loss, however, on the higher frequency. Since high
gain aerials can easily be constucted - /2 is about a foot QRP working is convenient, and 10 watts input will be ample
for most purposes. Remember, 10 watts into a 35 dB antenna
gives an equivalent output of over 30 kW.

but the 955, 636 and various disc scal and coplanar types will all function fairly well. BF stages will not give much gain, but are very useful for preventing local osc. radiation. 774 are noisy, and give little gain, but may be used in push pull

as an un-neutralised BFA.

On the transmitting side, the 832 will give 8 w of RF if doubling or trabling, but if driven direct can give 10 watts or so. The 3012 will take 70 watts in at 120 nes with no trouble, if the drive is up (3w), and so should easily take the 25w mat when trobling from up SCA532. These tubes are currently available at very reasonable prices.

Ocnstructionally, the use of Silver plated Copper or highly polished Aluminium is very necessary at this freq. the RF is only flowing in the surface of the metal, and any order layers, etc. will cause trouble. He wiring should also be of Ag plated Ou when possible. Tuned ects. can be loops of Ag/On wire, parallel (resonant lines, or concentric tubes remember they will be shorter than 1/4 depending on the tube capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities. RF chokes may be 1/4 sections of co-ax, or 5 turns capacities.

being low, but satisfactory in view of Our Plans For TV. Xtel mixers of the 1921 type are good, but avoid the 1834 series. Alternatively, some gain can be obtained by using valve mixers the 376 being less moisy than the 955. L.Os may be on 100 mee the 676 being less moisy than the 955. L.Os may be on 100 mee the 676 being less moisy than this band at the moment, due to the difficulty of preventing frequency drift.

edition of the magazine. (over)

"Getting On 420 mc/s" - Contd.

a simple super regen. ra for experimental purpos can be made thus:

Put EFCs in Etr and Etr-Cath. leads. A hairpin loop will do

as an aerial coupling loop.

An exhily built Tx can be made up from anSCR522 using an 8012 driven at 420 mos to give the full 25w input. The PA coil of the 522 is replaced by a single hairpin loop, and the aerial coupling link is removed. A clot about 2% inc. long, and wide enough to be a close fit round the 8012, is cuin the side of the PA case. The grid is earthed as follows:

A chim Copper ring is made to be a close fit round the tube, and about in wide. or clips are rounted on this to take the gri

On no account solder direct to the pins.

mica ring of equal size is made by cutt eng up a Valor oil stove front (cut under water for ease) and eplitting it as thin as possible. The mica is sandwiched in between the Cu shin and the chassis and aligned thus:

The grid lead can be taken via an aFC to the bias supply, the actual grid being at the bias supply, the actual grid being at leads are looped through the ex-PA case shown above, and are taken to their supplies via RF chokes.

with 750 volts on the anode, some 110 volts of bins will be required; with some three watte of drive.

is not normal on this hand due to the frequency drift in both receiver and transmitter. (Mert edit.: "420 mc Aerials"

CHAP IS DOING "

SiF!HARNAFORD, Preston. Has been using a 3" Orange tube for camera use, and his managed 120 line definition over a closed circuit. The rester was focussed on the gate of a modified 16rm sound projector, which had contacts on the driving spindle to sync the time bases to the 24 fps of the intermittent. Has a TV. Rs on Sutton Coldfield, and i yet another GPO type. Interested in wire recorders too! You will have to give the goar a dusting, om, and be ready to push a signal into SETI, about 28 miles, I this

DON BRADFORD, Denhan, Bucke. Has been busy getting his ticket and is now G3GBO. Nice work, oc, now you can really get

weaving on the VHF equipt.

A.F.HILLS, Harrow Weald. Is in the RAF most of the time, but has the use of a workshop on odd days. Has the painters in at home, but is installing various acrials prior to

building a TV Rx.

"MAC" MACWHIATER, Gt. Meols, Ches. Paid a visit to F9MH whilst in Paris on holiday, working some real DX there - another F about half a mile away, on 20! Mac is only home at weekends for the time being, as he is at Manchester Univ. Suggests a TV sked on 40. Has a cct. of a Preamp, 100 cs to 20 mcs, and hopes to get a 5527 by a swap with a W. Is making modifications to his Puser, but has wrecked his 931A: Maybe for Christmas.....

Concerned with a and test equipt. Is thinking of build

-ing another TV Rx.

BOB STERING. Sheffield. Bob had just been denobbed from the signals, and so h s not yet had much time to get going.

Is buying a tape recorder. How I many more of your

FRED WOOD, Bewley Hearth, Kent. Fred is a bit cluttered up with Hi Fi recording equipt, and as a result has put his I.F.C saids for the time being. Finds Evening classes and Finance rather large problems.

SARDI WEMISS, Poterofield, Hanto. Sandy is OHMS with the Signals, but is doing a lot of work on 420 and 485 rec Has no plans for HTV at the moment, but is very keen a

the RF cide of things.

FRED ROSE, Sunderly hd. Fred has just finished a TV Rx for Sic. (about 180 les away) which is an FB piece of construction. He suffers from the fact that out of 89 ham in and eround Sunderland, there is not one even Two netree, nover mind 120 nes. What about it, Fred to the sunderland to he was about it, Fred to the sunderland to he was about it, Fred to the sunderland to he was about it, Fred to the sunderland to he was about it, Fred to the sunderland to he was about it, Fred to the sunderland to he was about it, Fred to the sunderland to he was about it.

eye on matters VHF. Having fun with Time Rases.

and is now getting down to building an interlace generator. Is converting an 50.002 to 420 mcs, and hopes to be radiating a Sound test signal soon after Christmas.

pave BISHOP, Reymouth. Dave is another in the Signals, and is also concentrating on the RF side. He has under construction receivers for Two and 70 cms. He is also trying out aerial arrays for The Band.

Has put his Ike cameras on one side for a bit. Is hoping to get a couple of Mulland Optical Projection Units for monitor and viewing screens.

Iwan will be on Fone on all bands soon - and he is making a Tape receiver head...

PETE PIRKIN, Abinger, Surrey, is now OHMS for his 18 months with the RAF. As a last fling he has finished his Pulse generator, and details will appear in the next edition. Still no sign of his 5527, but Pete is hoping. To while away the time, Pete has also tried a 30 line discita using a 931 and a RAP1 for Rx. He managed to get it up to acclines at one stage. He has a pretty good selection of Cats to experiment with.
